General information

Airports are at the heart of Europe's transport system, and as the EU works toward smarter, more sustainable, and connected mobility, transforming airport operations and linking air travel with other transports is essential.

This event, hosted by International Airport of Athens, brings together SJU projects driving this transformation, providing a platform to share insights, foster collaboration, and discuss the latest innovations in passenger-centric digital airports and multimodality. It focuses on two main topics:

- Passenger Experience
- Operator Experience

Aligned with the vision of a Digital European Sky, the discussion aims to show how collective efforts can enhance airport operations, enable multimodal connectivity, and contribute to a high-performing, sustainable European transport system.
